

Amendments of the Specification

Please replace paragraph [0066] of the published patent application with the following amended version of that paragraph:

In one embodiment, the computer network 360 includes a plurality of servers 350 and a database 370. The database 370 includes television schedule information, which may be retrieved and viewed on PCTV 362. Servers 350 represent file servers having files, databases or the like. In a representative embodiment, the computer network is the World Wide Web and each server 350 is set up as a network file server addressable by a unique address. For example, the servers 350 may be configured to follow a common network protocol such as the Transmission Control Protocol (TCP), and the Internet Protocol (IP) (commonly referred to collectively as TCP/IP), and may be assigned a unique IP address or Internet domain name. For example, the servers may be assigned the domain name "invoice.com". The servers 350 may also have some form of server software installed to permit the system to function as an Internet graphics server. For example, the servers 350 may be configured with HyperText Transport Protocol (HTTP) server software to permit the system to function as an Internet "world

wide web" (WWW) server. In this embodiment, PCTV 362 may access servers 350 via the WWW using WWW compatible software by indicating the system's uniform resource locator address: ~~"HTTP://www.invoice.com"~~.
